(54) Title: **METHOD FOR FORMING MENUS**

(57) Abstract: A method of forming a menu on a display of an electronic device, which menu comprises at least two function elements (1) for selecting functions. The method comprises the steps of defining at least three display areas (A, B, C) that are substantially adjacent to each other in a first direction, defining at least a first identification part (2) and a second identification part (3) that are contained in the function element (1), displaying the first identification part (2) of the function element (1) in said first direction on the outermost display areas (A, C), displaying the second identification part (3) of the function element (1) on at least one display area (B) between said outermost display areas (A, C) in such a manner that the second identification part of the first function element and the second identification part of the second function element are positioned at least substantially next to each other in a second direction substantially perpendicular to said first direction. The invention also relates to a graphical user interface (GUI), a device, a system, a software program and to a storage medium.
